# Finance Agent Overview

1. Pull transactions
- Ask Claude to generate a transaction files (100 transactions)
- Result: csv file with all transactions

2. Categorize:
- Date: pull from transaction csv
- Description: pull from csv
- Transaction categories
    Based on the csv. If agent does not know what categories, leave the transaction in the open items → human correct it in review step.
    - Rent
    - Contractors
    - Software
    - Bank fees
    - Total

- Types:
    - Income: credit (-), checking (+)
    - Expense: credit (+), checking (-)

- Receipt:
    - Ok
    - Missing

3. Reconcile
- Calculate how much money we spend (theoretical money) = money we already have + income - spend
- Pull bank statement number from the csv. .
- Compare theoretical money vs statement number from csv. Needs to match with balance in the bank statement #. If not, flag it in the delivery result for human review.

4. You review
- Human reviews

5. Deliver

- Cover: who the books belong to and period covered:
- Ledger: date, description, category, type, amount, receipt
- Expenses: category, amount
- Reconciliation: calculation and check if the amount matches with bank statement
- Income: from, date, amount, document
- Contractions: contractor, total, this month, form
- Open items: item, reason, status

Use case:

- Check at the end of the month
